CAREER OBJECTIVE

Information Technology graduate with a strong foundation in Python, SQL, and Machine Learning concepts including supervised/unsupervised learning, regression models, and transformer architectures. Experienced in building data-driven and automation-based applications using REST APIs, Django, and Flask. Seeking an entry-level AI/ML Engineer role to apply analytical and programming skills toward developing, training, and deploying intelligent systems.

EDUCATION QUALIFICATION

DVR & Dr. HS MIC College of Technology B. Tech – Information Technology	2022 -2026 CGPA: 9.14/10
Sri Padmavathi Junior College Intermediate (MPC)	2020– 2022 CGPA: 9.1/10
Z.P. High School SSC	2019 – 2020 CGPA:9.8/10

TECHNICAL SKILLS

Languages	: Python, SQL
Web Technologies	: HTML, CSS, JavaScript
AI / ML	: Supervised & Unsupervised learning, Word Embeddings, Self- Attention Mechanism, Transformer, Model Parameters, Model Quantization, LangChain, Langgraph.
Frameworks	: Django, Flask
Technologies	: REST APIs, CRUD Operations
Tools	: Git, Github, VSCode, N8N

PROJECTS

Automation – AI Email Negotiation System	JavaScript, Python, Django, Flask, REST APIs, n8n
- Built an AI-powered system applying transformer-based LLM concepts for automated email classification and response generation. - Integrated REST APIs to process and respond to incoming email data dynamically, reducing manual email handling effort. - Designed workflow automation pipelines using n8n for intelligent, end-to-end email handling	
Smart Blood Donation Management System	HTML, CSS, JavaScript, Node.js, MongoDB, AWS
- Developed a full-stack web application to streamline blood donor registration, inventory management, and request processing. - Designed and integrated a MongoDB database for efficient storage, retrieval, and management of donor records. - Implemented data validation and secure form handling, improving system reliability and user experience.	
Vault Flow – Secure Digital Banking System	Django, Python, SQLite3, HTML5, CSS, JavaScript
- Built a secure banking application with encrypted PIN storage and email-based transaction/login alerts. - Implemented core banking features including user authentication, balance management, transaction history, and fund transfers.	

INTERSHIPS

Cyber Job Simulation – Deloitte (Forage)

- Applied cybersecurity concepts through risk analysis, threat identification, and real-world business case
- Analyzed security risks and explored incident response approaches in simulated business scenarios.
- Investigated simulated technical issues and applied structured problem-solving approaches to identify potential solutions.

PROFESSIONAL - CERTIFICATIONS & ACHIEVEMENTS

- MIC Excellence Award – DVR & Dr. HS MIC College of Technology
- NPTEL Certified – Introduction to Internet of Things (IOT)
